

Technology that saves lives

VM Series Life Safety Control System

Description

VM Series represents the latest generation of life safety control panels for mid to large sized applications. With large multi-message displays, intuitive interfaces, and stylish contoured cabinets — these systems capture the imagination, and catch the eye. But behind the LCD display is where they really shine.

New TCP/IP-enabled microprocessors and chipsets take full advantage of the latest advances in computing technology, leading to smarter, faster, higher-capacity processing and more efficient designs. VM Series's patented Voltage Boost[™] technology, for example, delivers constant voltage on NAC and AUX circuits – even at low battery power – resulting in lighter cable requirements and/ or longer runs. That saves time and money.

High performance processing also leads to powerful networking features and versatile digital audio functionality. In fact, VM Series can handle jobs that range from a single stand-alone control panel, to a sophisticated network comprising as many as 24 control panels processing data from up to 24,000 devices.

High quality voice evacuation also delivers system design flexibility with scalable implementation from simple Place-of-Assembly capability right up to multi-channel operation for highrise and campus applications. VM Series features three channels of integrated digital audio. Its optional paging control center includes a high quality paging microphone to which can be added a firefighters' telephone.

VM Series makes all this new technology readily accessible with easy installation and maintenance. Electronic addressing means devices virtually install themselves, while intuitive installation and detailed diagnostic tools offer a clear and rapid path to flawless system operation.

Standard Features

- One Class A or Class B intelligent device loop standard, optional loops brings control panel capacity to 1000 devices
- 24-line by 40-character backlit LCD capable of displaying eight simultaneous events
- Optional voice evacuation and firefighter's telephone
- Part of an end-to-end audio solution suitable for low frequency signaling in sleeping areas
- Optional network interface slots are located on the back of a swingable mounting chassis
- · Electronic addressing with automatic device mapping
- Optional Ethernet port for diagnostics, programming
- Supports strobe synchronization
- Supports up to 30 R-Series remote annunciators with either Class A or Class B wiring
- Networkable up to twenty four VM control panels monitoring 24,000 intelligent points
- Patented Voltage Boost[™] technology delivers constant voltage on NAC and AUX circuits even at low battery power.
- 10 Amp UL listed power supply with universal 94 to 264 Vac input voltage
- Integrated Carbon Monoxide gas sensing with V-PCOS detectors including distinct audible signaling
- Four on-board Notification Appliance Circuits
- Room for three optional front panel LED/Switch modules
- Optional Ethernet interface
- UL2572; UL864 UUKL; UL 864 Listed for releasing applications using GSA-REL
- Optional earthquake hardening: seismic Importance Factor 1.5

Application

Application flexibility is where VM's leading edge computing power is put to best use. This generation of control panels is equally at home as the center of a simple single-building standalone system as it is when part of a sophisticated life safety network serving thousands of points across multiple buildings. Optional voice evacuation bridges the gap left by other mid-range systems, and makes these panels a cost-effective solution for most applications.

Efficient, cost-effective networking

Networking is among VM Series's strong suits. A simple VM Series network can comprise up to eight control panels – enough to serve the needs of most campuses and larger buildings. Highly efficient RS485 connectivity, plus fiber-optic communications deliver faster response times and more sophisticated diagnostic capabilities, while cost-effective remote annunciation solutions keep basic monitoring and control always within reach.

Audio that speaks for itself

VM Series features three channels of integrated digital audio with up to two minutes of on-board programmable message storage. An optional paging control center includes a high quality paging microphone to which can be added a firefighters' telephone. Auxiliary inputs are available for

An optional paging microphone provides local, as well as remote, audio functions.

mass notification operations and connection to external systems.

Versatility built right in

The VM control panel has room for three fully-programmable front panel switch/LED strips. Each strip includes 12 switches with two associated LEDs (one quad-color, and one yellow), and a custom label area. LED color designations are assigned by the installer.

Perfect for retrofits

VM Series is particularly well-suited to retrofit applications. All connections are made over standard wiring – no shielded cable required. This means that in most situations existing wiring can be used to upgrade a legacy control panel to VM Series technology without the expense or disruption of rewiring the entire building.

Clear-cut remote annunciation

Up to 30 R-Series LCD, LED annunciators and driver interface cards may be configured for each control panel on the VM Series network. Compatible annunciators include a range of LED and LCD models that provide zone or point annunciation, as well as common control capabilities. VM Series also supports graphic annunciation with optional

Up to 30 R-Series annunciators may be configured for each panel on the VM Series network

graphic snnunciator interface modules. Each interface provides common control, indicators, and 32 LEDS. Expansion units provide 48 led outputs.

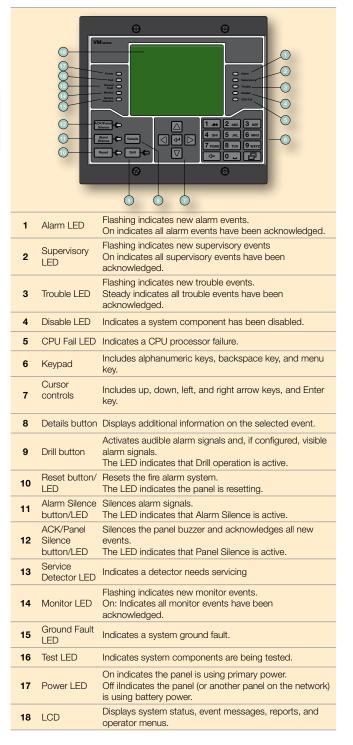

Power that goes the distance

Kidde's patented Voltage Boost™ technology delivers constant 22.5 Vdc on NAC and AUX circuits – even at low battery power. This means lighter gauge cable can be used for equivalent distances compared with conventional power supplies, or longer wire runs on the same gauge cable. Either way, this breakthrough technology saves time and equipment costs, making VM Series not only a highperformance solution — but a cost-effective one as well.

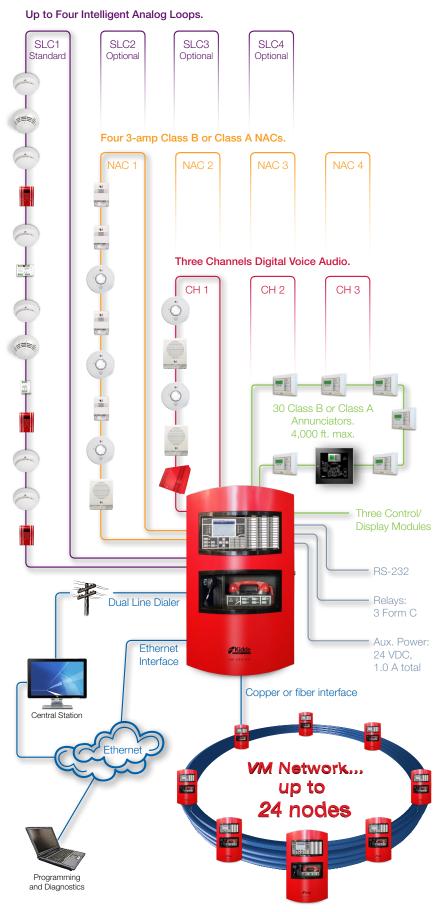

Scalable IP and Cellular Communications

Several popular third-party IP/Cellular communicators have been tested with the VM control panel and are compatibility listed to UL864. The IP/Cellular communicators meet NFPA72 2013 edition requirements for sole or secondary transmission paths. Using IP/Cellular communicators can reduce the cost of ownership by eliminating POTS lines. Please see the VM control panel compatibility documentation part number 3101804-EN for a full list of compatible communicators.

Operation

Signaling Line Circuit

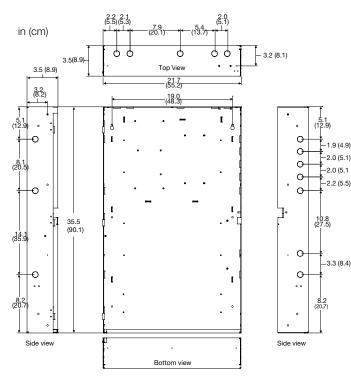

Assembly

Dimensions

The backbox is designed for semiflush or surface mounting. Conduit and nail knockouts, keyhole style mounting holes, and wide wiring troughs facilitate efficiency during installation.

Note: Add 0.25 in (0.64 cm). to height and width dimensions to allow for knockouts when framing in the backbox for semiflush mounting.

Specifications, standard equipment

Main Board The VM-1 consists of the following components, CPU main board, LCD display, one SLC card, power supply, back box and door. The CPU main board processes all information from modules installed in the same cabinet and from other control panels on the VM network.

Voltage	24 VDC
Current	24 000

D12LS-VM Control-Indicating Module provides additional operator interface capability. The module consists of 12 groups of two LED-switches arranged as a top LED that is software programmable to amber, red, blue, or green, and a bottom amber LED.

Voltage	24 VDC
Current Standby Alarm	11 mA. 11 mA plus 2.5 mA for each active LED, 58 mA max.
Operating environment	
Temperature	32 to 120°F (0 to 49°C)
Relative humidity	0 to 93% noncondensing

ACHS Audio Channel Selector Card converts digital audio from an EAEC card into an analog preamp signal. A VM-1 control panel supports up to three ACHS cards.

Voltage	24 VDC
Current	
Standby	47 mA
Alarm	64 mA
Circuit	
Designation	Class B (Style Y) or Class A (Style Z)
Output	1 VRMS analog signal
Resistance	100 Ω max.
Capacitance	0.2 μF
EOL resistor	15 kΩ
Wire size	18 - 12 AWG (0.75-2.50 mm ²), twisted pair [1]
Amplifier capacity	Fifteen AA30/50 amplifiers per ACHS
Compatible controllers	EAEC, AMK-RN, VM-MFK
Operating environment	
Temperature	32 to 120°F (0 to 49°C)
Relative humidity	0 to 93% noncondensing

Voice Evacuation in Sleeping Areas

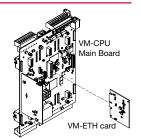

VM system audio components are system is part of an end-to-end low frequency solution listed to UL 464 and UL 864. The system is approved for code-compliant 520 Hz signaling in sleeping areas when used in conjunction with:

- integrated voice audio capability
- a factory-supplied 520 Hz audio file
- one or more Genesis High Fidelity speakers (G4HF or GCHF series)

Consult the VM Control Panel Compatibility List for details.

VM-ETH Ethernet Adapter Cards

Three optional Ethernet adapter cards are available for VM applications. Each of these provide specific features such as panel programming, diagnostics, and status monitoring, as well as central station connectivity, and email or email-totext messaging capability.

Supported communications	ETH1	ETH2	ETH3
Standard 10/100 Base-T Ethernet network connection for panel programming and diagnostics	•	•	•
IP Dialer Communications		•	•
Email and Text Communications			٠

Each VM control panel supports up to eight IP services, which can provide connection to any combination of the following functions:

Programming IP Dialer (IP-DACT) Email

Each VM network supports up to:

100 Dialer Accounts, and;

100 Email Accounts (up to 20 email addresses per account).

VM-ETH1, VM-ETH2, VM-ETH3 Specifications

See Ordering Information for adapter card functional descriptions

Ethernet	10/100 Base-T	
Voltage	24 VDC	
Current		
Standby	42 mA	
Active	54 mA at 24 VDC	
Connection mode	Auto negotiation	
Wire runs		
Distance	200 ft. (60 m) max. [Note 1]	
Туре	Standard Cat 5 or Cat 5e	
Connector	RJ-45	
IP address	192.168.001.003 (default)	
Subnet mask	255.255.255.0 (default)	
Default port ID	2501	
Gateway	000.000.000 (default)	
Operating environment		
Temperature	32 to 120°F (0 to 49°C)	
Relative humidity	0 to 93% noncondensing	
Note 1: Panel to communication equipment		

VM-DACT Dual Line Dialer Card provides dialer communications between the VM-1 control panel and remote locations over telephone lines. Alarm, supervisory, and trouble information is transmitted to the remote site using one or two telephone lines in dual or split format to any desired receiver.

Voltage	24 VDC
Input power	
Supervisory	60 mA
Active	95 mA
Output	19.2 or 38.4 Kbps
Output current	100 mA max.
Phone line	One/two loop start line on public switched telephone network, pulse, or DTMF dialing (party, ground start, and PBX lines are not acceptable.)
Modem	V.32 bis 14.4 Kbaud
Dialer protocol	Contact ID
Wall connector	Standard RJ-31X or RJ-38X phone jack
Line supervision Trouble Off-hook current	When on-hook line voltage < 10 V < 10 mA
Telco compliance	Communications Canada CS-03, FCC/CFR 47 Part 68
FCC registration number	EDWUSA-47115-AL-E
Operating environment	
Temperature	32 to 120°F (0 to 49°C)
Relative humidity	0 to 93% noncondensing

Ordering Information

Intelligent Analog Control Panels

Intelligent An	alog Control Panels		
VM-1R (English)	VM-1R-FR -CA (French Canadian)	FACP complete system with user interface, CPU, one addressable loop, four Class B NACs, Universal 110/220v 10 Amp power supply, red door. Order VM-SLC for second loop.	
VM-1S (English)	VM-1S-FR -CA (French Canadian)	FACP complete system with user interface, CPU, one addressable loop, four Class B NACs, Universal 110/220v 10 Amp power supply, silver door. Order VM-SLC for second loop.	
Option modu	les and accessories for V	/M series	
VM-SLCXB	Signaling Line Expander C	Card, comes with one loop, for a second loop order VM-SLC.	
VM-SLC	Loop Expansion Module, 250 addressable devices total: 125 detectors, 125 modules.		
VM-SLC-HC	High Capacity Loop Expansion Module. For use with circuits that contain more than 90 isolators.		
VM-DACT	Dialer, dual line.		
D12LS-VM	Control/Indicating Display Strip, 12 groups: two LEDs (1 4-color, 1 yellow) with switch.		
VM-BF	Blank Front, Outer Door Window		
CLA-PS10	Class A Adapter, PS10 NACs.		
CAB6BEQ	Seismic hardening Kit for b	atteries up to 17Ah. Larger batteries use external cabinet BC-1.	
VM-MFKEQ	Master Firefighter Telephone Seismic Kit		
MIR-PRT/S	Desk mount printer		
BC-1	Free-standing battery cabinet with key lock		
BC-1R	Free standing battery cab	inet with key lock; Red	
BC-1EQ	Seismic hardening Kit for BC-1 series enclosure		
VM-ELEC	Replacement Base Electro	onics kit.	
VM-ELEC -FR-CA	Base Electronics, replacer	nent, Kidde. French Canadian Language	
PS10-4B	Replacement power supp	ly	

Note: For earthquake anchorage, including detailed mounting weights and center of gravity detail, please refer to Seismic Application Guide 3101987-EN. Approval of panel anchorage to site structure may require local AHJ, structural, or civil engineer review.

Audio components

Programmin VM-CU	g Tools Programming software CD, VM series control panels. Requires USB hasp.			
VM-ETH3	Ethernet adapter card provides all the function of the VM-ETH2 plus the added capability of sending email messages as well as SMS text messages by means of email-to-text.			
VM-ETH2	Ethernet adapter card provides all the function of the VM-ETH1 plus the added capability of communicating to compatible digital alarm receivers. Please refer to the VM UL Compatibility List for the latest compatible receivers.			
VM-ETH1	Ethernet Adapter, 10/100, provides Ethernet connection from system to VM-CU for programming and diagnostics remotely. Uses standard Ethernet cable (not supplied).			
	nmunication Options			
SMXLO2	Standard Output Single Mode Fiber Optic Transceiver for VM-NOCF. Duplex SC connectors.			
SMXHI2	High Output Single Mode Fiber Optic Transceiver for VM-NOCF. Duplex SC connectors.			
MMXVR	Standard Output Multi Mode Fiber Optic Transceiver for VM-NOCF. ST connectors.			
VM-NOCF	Fiber Optic Communications Interface, Class A/B Network, Class A/B Audio Data. Provides single and/or multi mode network and dig audio fiber optic connections. Order VM-MMXVR, VM-SMXHI2 or VM-SMXLO2 transceivers separately.			
VM-NOC	Network Option Card, RS485, Class B and Class A wiring.			
Network cor	nmunication options			
APS10A	10 Amp Booster Power Supply			
APS6A	6.5 Amp Booster Power Supply			
SIGA-AA50	50 Watt Intelligent Audio Amplifier			
SIGA-AA30	30 Watt Intelligent Audio Amplifier			
VM-ARM	Remote Microphone, includes cabinet. (Add "S" for surface.)			
AMK-RN	Audio mounting kit. Used to mount ACHS option cards in control panels without audio system control components.			
EAEC	Emergency Audio Evacuation Controller, board only. For replacing controller in VM-PMI.			
ACHS	Audio Channel Selector, one channel, supervised preamp output, three max per panel.			
VM-MFK	Master Firefighters' Telephone Kit. Includes single riser interface (Class B or A), and master telephone. Requires VM-PMI for mounting.			
VM-PMI-LK -FR-CA	PMI language kit, includes paging microphone and Fire fighter phone language kit - French Canadian Language.			
VM-PMI	Audio System Control and Paging Interface. Includes audio control unit, interconnect cables, mounting plate, paging interface with microphone, and user controls.
